Continuation of 5. does NOT place the application in condition for allowance because: applicants argue that Pinnavaia does not teach or suggest a process for making a structural foamed polymer article of a nanocomposite polymer. This is not persuasive because the claims are not restricted to such a foamed polymer article. Applicants also argue that the cited reference only teaches a nanocomposite polymer which has not been formed into an article. This is not persuasive because the Abstract of the cited reference teaches forming the composite into a thin layer, such that claim 1, in reciting the formation of a film, is readable on the reference. Applicants' arguments concerning "flowing" are noted by the examiner; these have been addressed in the previous Office action. Applicants also argue that the structural foamed article is made by injection molding which is not disclosed by Pannavaia. This is also not persuasive because the claims are not limited to the use of injection molding.
